

## ADVANCING HEALTHCARE SERVICES.

Speare Memorial Hospital is excited to announce the addition of two highly skilled specialists to our team, enhancing the care we provide to our patients: podiatrist **Dr. Dennis Claire** (*left*) and gastroenterologist **Dr. Jonathan Lamphier** (*right*).

### DR. DENNIS CLAIRE

Board-certified by the American Board of Podiatric Medicine, Dr. Claire earned his medical degree from the School of Podiatric Medicine at Barry University in Miami and completed his surgical residency at St. Vincent Hospital in Massachusetts. With more than a decade of experience, Dr. Claire focuses on nonsurgical solutions for treating people with foot pain and office-based minimally invasive procedures. Additionally, he will see patients at Speare's Wound Care Center.

Dr. Claire has specialized experience with sports medicine and pediatric issues. His priority is promptly seeing people of all ages with developing problems to help keep them out of urgent care or the emergency department. This includes ingrown toenails with infection, foot infections, gout, foreign objects, injury, and foot pain that limits movement. In treating wounds that won't heal, Dr. Claire considers all the possible reasons the wound exists to achieve the best healing possible without adverse outcomes. This may include nerve damage, poor circulation, pressure and friction from shoe wear, and diet.

### DR. JONATHAN LAMPHIER

Dr. Jonathan Lamphier, a board-certified gastroenterologist with over 20 years of experience, is now offering gastroenterology services at Plymouth General Surgery. His expertise includes diagnosing and treating conditions such as acid reflux, swallowing disorders, ulcers, abdominal pain, irritable bowel syndrome, constipation/diarrhea, inflammatory bowel disease, liver disease, and more. He also performs endoscopic procedures, including upper endoscopy (EGD), colonoscopies, esophageal dilation, and treatments for gastrointestinal bleeding.

Dr. Lamphier earned his medical degree at Boston University School of Medicine and completed his fellowship training in digestive diseases at Emory University School of Medicine in Atlanta, Georgia. He has provided exceptional digestive health care to patients from Florida to New Hampshire.
